

SOFTWARE ENGINEER | DIGITAL TRANSFORMATION SPECIALIST

Mid-to-Senior Software Engineer specializing in **backend development** and **media supply chain automation**. Demonstrated success in engineering large-scale fulfillment workflows using **Python, AWS, and SDVI Rally**, resulting in significant process optimization and the elimination of manual interventions. Highly skilled in **microservices architecture, REST APIs**, and **technical leadership**, with a commitment to establishing robust development protocols for complex integrations.

AREA OF EXPERTISE

Agile Methodologies | Continuous Integration | Responsive Design | Code Coverage | Unit Testing | End-to-End Testing | System Integration | Data Retrieval | Microservices Architecture | Rest API | Alert Management | Version Control (Git) | Frontend Development | Backend Development | Technical Leadership | Cross-Functional Collaboration | Problem-solving | Mono-repository | Python | AWS

EDUCATION

Master of Computer Application | Anna University, Tamilnadu, India
Bachelor of Computer Applications | Bharadhidhasan University, Tamilnadu, India

AWARDS

Apollo Inspiration Award Nominee | OYNX
Pure Excellence Award | SPARKS

CAREER EXPERIENCE

Software Engineer - ITV Plc April 2025 –Present

- Engineered and delivered high-quality Python code for critical applications, focusing on maintainability and performance.
- Applied cloud-based architecture standards on AWS, contributing to the ITV Common Platform.
- Engaged in comprehensive testing (e.g., integration, system, non-functional) to ensure software reliability and correctness.
- Collaborated effectively within an Agile team, utilizing Git/GitHub and CI/CD pipelines for efficient development and deployment workflows.
- Translated operational needs into practical software solutions, supporting content delivery and operations teams.

Mid-Level Accelerator: Python & Cloud Architecture | Code First Girls April 2026 – Present

- Pursuing a competitive 16-week intensive program designed to transition high-potential engineers into mid-senior roles. Developing advanced proficiency in scalable backend architecture, CI/CD pipelines, and cloud-native Python development including BDD.

Career Gap/Upskilling May 2024 –March 2025

- Completed intensive Kickstarter courses in **SQL (Data), JavaScript, and Python & Apps** via Code First Girls (sponsored by Cognizant and Capgemini).

Graduate Software Engineer - Frontend | Marks and Spencer Plc 2023 – 2024

- Optimized user experience across desktop and mobile by engineering responsive features with **HTML, CSS, TypeScript, and Next.js**.
- Enhanced system architecture by leading the transition to **GraphQL Federation** for more efficient data querying.
- Ensured 99.9% software reliability by driving **automated testing** strategies and troubleshooting **CI/CD** pipeline errors.

- Fostered a culture of excellence by providing technical leadership and constructive feedback during **code reviews**.

Graduate Software Engineer - Backend | Marks and Spencer Plc 2022 – 2023

- Managed the **Customer Engagement Channel** (Sparks Account & Charities) by developing **Java** and **Spring Boot** microservices for digital card allocation.
- Optimized system reliability and deployment by onboarding microservices into **Muziris** and managing **New Relic** alerting systems.
- Leveraged **Spring Cloud Contract** and **Agile methodologies** to ensure seamless **REST API** integration, earning the **Pure Excellence Award** for technical contributions.

Internship | Newson.io 2021 – 2021

- Enhanced platform functionality and user engagement by collaborating with cross-functional teams on feature implementation. Utilized **A/B testing** and market research to lower bounce rates, improve conversion, and provide data-driven strategic insights to senior management.

PROJECTS

Intelligent Movie Suggestion(LLM-Based) | ITV Plc Sep 2025

- **Overview:** Developed an AI-driven search feature to move beyond rigid keyword matching, allowing users to discover content through descriptive themes and natural language (e.g., "dystopian sci-fi with a strong female lead").
- **Key Contributions:**
 - Leveraged **Large Language Models (LLMs)** to interpret user intent and conceptual search queries.
 - Partnered with the Content Team to unlock catalog discovery, aiming to increase user engagement and watch time.
 - Presented the prototype during the **CST Innovation & Collaboration Day**, where it was selected for ongoing development within the ITV ecosystem.

Postpartum Fitness & Wellness Tracker May 2026

- **Overview:** Building a full-stack application designed to support postpartum mothers in tracking physical recovery and mental well-being.
- **Technical Stack:** Python, Microservices Architecture, JWT, CI/CD.
- **Key Features:**
 - **Microservices Architecture:** Designed independent services for exercise tracking, weekly journaling, and user streak management.
 - **DevOps Integration:** Established a robust **CI pipeline** to ensure high code quality and automated testing for each service deployment.
 - **User Engagement:** Integrated a "streak" logic and journaling system to promote consistent usage and habit formation.

ADDITIONAL EXPERIENCE

Teacher | Multiple School and College 2013 – 2022

TECHNICAL SKILLS

Frameworks/Language: React | Next JS | Typescript | Java | Spring Boot | Spring Cloud Contract | Python
Tools: GIT | GITHUB Action | New Relic | MongoDB | GraphQL
